

## HW 2: Docker

To begin, please fork the template repository provided on the course website. Make sure that your fork is public

### **Section 1: Prerequisite**

Clone the forked repository onto your computer

### **Section 2: Homework Assignment**

1. (30 points) Write a `Dockerfile` that performs the following tasks:

- Uses the Debian `bookworm` operating system as the base image.
- Installs Miniconda using the latest installer. For more information, refer to the documentation: <https://docs.anaconda.com/miniconda/install/>.
- Clones the following repository into the root directory: <https://github.com/dbarnett/python-helloworld>.

Commit the `Dockerfile` to your forked repository.

2. Submit the repository URL on Gradescope.
